

Generative AI in Medical Imaging (NIH, 2025) — Covers data synthesis, image enhancement, modality translation, and spatiotemporal modeling for robust anomaly detection

[_pmc.ncbi.nlm.nih](https://pubmed.ncbi.nlm.nih.gov/)

Explainable AI (XAI) in Medical Imaging (BMC Med Imaging, 2026) — Systematic synthesis of XAI techniques for transparency and clinical trust, including U-Net++ with attention mechanisms for fetal ultrasound segmentation

[pmc.ncbi.nlm.nih](https://pubmed.ncbi.nlm.nih.gov/)

Smart Medical Image Processing: XAI + Generative AI (MDPI Algorithms, 2026) — Proposes a unified architectural system concept for multi-pathology detection using combined XAI and GAI.

mdpi.com

Demystifying XAI in Medical Imaging (MDPI Sensors, 2026) — Comparative analysis of 18+ XAI techniques with standardized evaluation metrics for segmentation, classification, and diagnosis.mdpi

Explainable AI in Cancer Imaging: Scoping Review (JMIR, 2026) —

Maps 371 studies on xAI methods across cancer modalities; highlights validation gaps and integration challenges.

jmir.org

Responsible AI in Medical Imaging (Front. Digit. Health, 2026) — PRISMA-informed review of 24 studies on transparent reasoning, bias mitigation, and regulatory alignment.

frontiersin.org

Efficient Deep Learning for Medical Imaging (arXiv, 2026) — Lightweight architectures (CNNs, Vision Transformers, Linear Complexity Models) and compression strategies for clinical deployment.arxiv
